①

I am a co-founder of Citizens for Better Health founded in 1991 and incorporated in 1992 Our group was made up of sick workers + residents.

In 1995 I became to sick

②

to continue in CBH. At age 30 my quality of life was destroyed by illness, until then I had been active in sports + in good health.

I was the first woman to do radioactive and Hazardous Waste Sampling at X-10. a few of the projects I worked on were: Picking up fish on White Oak Lake - over 1600 in a two day period.

Betty H. Freels

I also worked on the 3019 canal were a spent fuel rod was located in 12 ft of water. Our job was to sample the sediment in the bottom of the canal to see if cleanup was reached. after two days of sampling I became tired + My Blood Pressure dropped to 60/40 and I was ordered by my doctor to Bed rest. While sampling I was told to wrap the sampling Hoe around My

Right arm and lean over the canal to hold the sampling jar that contained the sediment. I belive this to be the cause of for my veins in my left arm ~~to~~ being fried. Managment + DOE knew for to years prior to this that the fuel rod was there. I found out later that the rod was raised half way out of the water + it set off all alarms in the Building and if you raised it all the way out you lived 11 mins

I am on total disability because of Nickel in my bone marrow and Heavey Metal poisening. I have spoke out in the past until I became to sick to deal with all the harassment because of my friend Bud Vonadoe and my doctor William Reid.

Our phone has been tapped, we have been followed, our Mail has been opened and Have been audited by IRS. I believe all these things have

Happend because of contamination in the work place. I have sampled at all three plants X-10-Y-12-K-25 and have work for DOE on offsite Monitoring of other Government facilitys. Feel free to contact me at 435 0420 if further Info is needed.

Sincerely
Betty H Freels
